

Welcome to the LGA's Technology Innovation Showcase

Thursday 14th November

9.30am – 3.30pm

Bevin Hall, 18 Smith Square & via Zoom

Welcome and introduction

Setting the scene: AI in
local government

Introduction to LGA's Cyber, Digital and Technology Programme | LGA

Rebekah Wilson
Programme Manager
LGA

Rebekah is a Programme Manager at the Local Government Association (LGA) in the Cyber, Digital and Technology team – supporting councils with using digital technology to achieve better outcomes and value for employees, residents, businesses and visitors.

Rebekah has worked at the LGA for ten years, specialising in research, data and insight. Her career has included working in academia, the charity sector and for a research foundation. She has spent more than 20 years leading and contributing to projects focusing on issues affecting local communities.

House-keeping | Virtual attendees

- Please mute your microphones and put your cameras on where possible.
- We've enabled live captions for anyone who'd find that useful.
- To take part in the Q&A sessions, please post your question in the chat, or raise your hand.
- We'd encourage you to post your thoughts, questions and feedback throughout the day.
- Virtual attendees please reach out to Florrie, Disha and Issy who will make themselves known so you have a point of contact.

House-keeping | In-person attendees

Emergency evacuation instructions

There are 2 escape routes from the conference centre. Exit points are clearly signposted.

1. Exit **via the glass doors by the conference registration desk**, which lead onto Dean Bradley Street.
2. Exit **via the side foyer door to the goods lift lobby, through the exit doors and down the alleyway** into Dean Bradley Street. This is also the exit for wheelchair users as shown in the diagram below. Wheelchair users: do not use the wheelchair lift at the front entrance. Due to the slope, assistance will be provided.

On hearing the fire alarm (a continuous siren)

- Leave the building immediately and proceed to the assembly point: Tufton Street
- Wait at the assembly point until given the all clear to return to the building

Wireless internet access

Enable 'Wireless Network Connection'

- Connect to LGA-Guest-WiFi
- Complete form if using for the first time: you will automatically connect in future
- Please turn mobile devices to silent mode

Introduction to PUBLIC | LGA

Johnny Hugill
Director
PUBLIC

Johnny Hugill is a Director at PUBLIC, where he has been since 2017. Johnny has been working with MHCLG and the local council since 2023 to evaluate their local digital and cyber funding. He advises local councils and central government on how to drive procurement innovation, including shaping the new UK Procurement Act.

Agenda for the day | LGA & PUBLIC

Agenda item	Time
Welcome and Introduction	10.00 – 10.10
Welcome address: Intelligent Council Services with Cllr Alex Coley	10.10 – 10.20
Showcase overview	10.20 – 10.30
Challenge 1: Planning	10.30 – 11.10
<i>Comfort break</i>	11.10 – 11.15
Challenge 2: Improving local places	11.15 – 11.55
<i>Lunch</i>	11.55 – 12.40
Keynote Speaker: Empowering ethical and safe procurement of AI with Ada Lovelace Institute	12.40 – 13.20
Keynote Speaker 2: AI in the heart of government with Eoin Mulgrew	13.20 – 13.40
Challenge 3: Supporting social care practitioners	13.40 – 14.20
<i>Refreshment break</i>	14.20 – 14.35
Challenge 4: Digital front door	14.35 – 15.15
Showcase close & next steps	15.15 – 15.30
Networking session	15.30 – 16.30

Intelligent Council Services

Intelligent Council Services | Cllr Alex Coley

Deputy Chair, LGA Improvement and Innovation Board

Alex is the Deputy Chair of the Improvement and Innovation Board at the LGA. A former civil servant in Cabinet Office and Head of Digital at the Met Police, he has worked in digital for two London councils and an NHS charity. Alex also worked as a Technical Strategist for a digital agency, horizon scanning for new AI technology.

Innovation in practice: Setting today's challenge stage

Who are we | Meet the LGA team

Sarah Slate
Digital Advisor
LGA

Tom Hindmarch
Digital Advisor
LGA

Responding to Sector Needs | What we have heard

- Start of the AI Journey
- Generative, receptive and predictive AI
- Where can AI add the most value?
- How can AI be deployed safely and compliant with public sector regulations?
- Can AI and Smart Technology support with cost-savings

Council's current use of AI capabilities

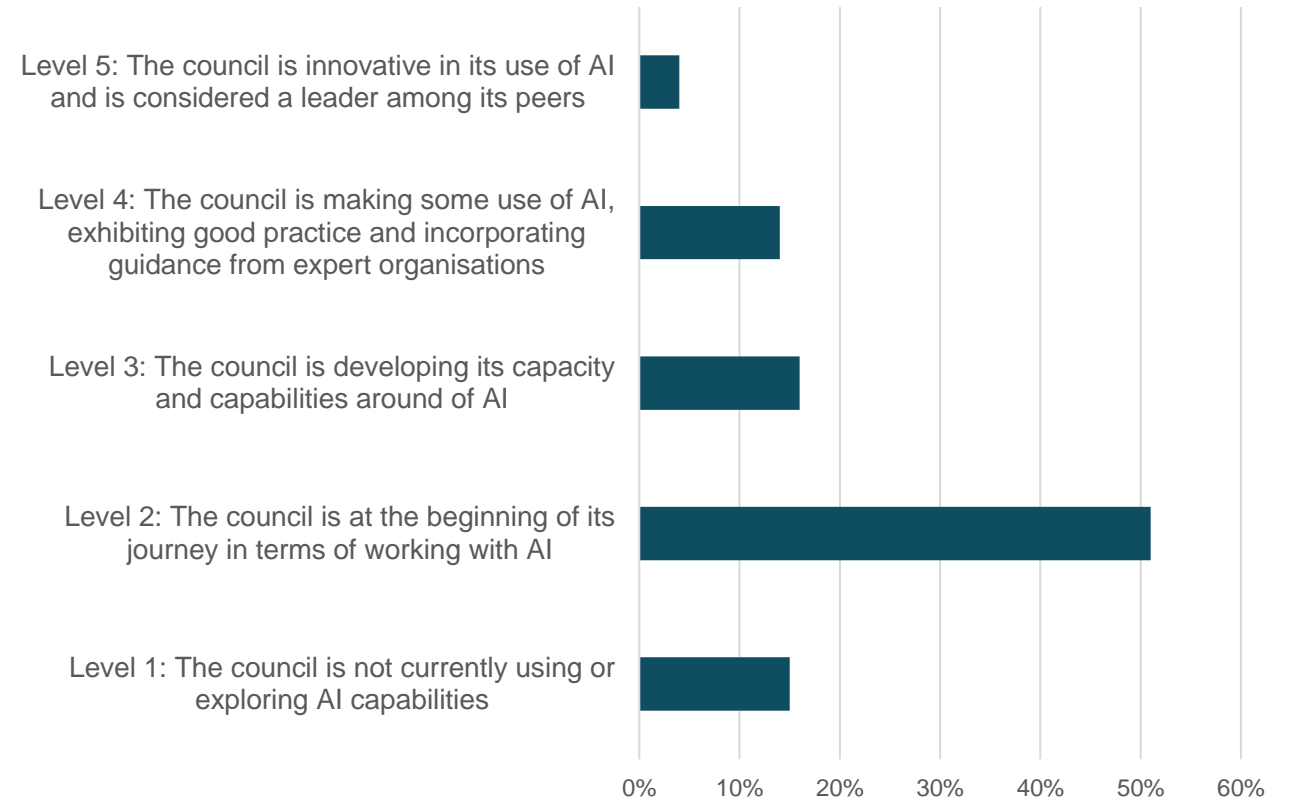

Figure 1: LGA state of AI in the sector survey February 2024

Our approach | Innovative Collaboration

Collaboration across the sector to co-define challenges and share learnings

Showcase the potential AI and smart technology can add to service delivery

Champion a new market engagement approach and challenge-led approach to procurement

Driven and shaped by local government priorities | Council engagement

The value of challenge statements, 'How can we..?'

Engaged with over 100 officers through our networks and open calls

Facilitated co-development of challenge statements across over 30 different councils

Key insights into the challenges and possible use cases for AI and smart technology

Challenge-led approach to the market | Selecting vendors

Open call to vendors and specific outreach

A multi stage assessment process

Training and preparation of vendors

What to expect next | Order of the day

- Enjoy the day collaborating across sectors and ask questions
- Making the most of online and in-person networking
- Beyond the Showcase – next steps

Efficiency in the planning process

Expert panel

Brett Leahy

Strategic Director of Planning, Growth & Infrastructure, Enfield Council

Bridget Wilkins

Head of Adoption, Engagement and Innovation, MHCLG Digital Planning

Wei Yang

CEO, Digital Task Force for Planning

Background

A challenge felt by numerous planning authorities..

The challenge

What is the challenge?

- How can AI and smart tech tools enhance the efficiency of different stages of the planning process?

This is a unique challenge for councils in the face of:

- **Increasing workloads** for each application
- **More connected society** gives more options and awareness for people to comment
- **Higher customer service expectations**
- Getting to the **root cause**, and not throwing more resource at the problem

The Democratisation of Understanding

- It doesn't matter how you say it, it matters what you say
- I can say 'you are pretty' or I can quote Sonnet 18
- LLMs can split, translate, group and assess responses into individual comments
- Build general solutions you can use with specialist knowledge to deliver specific solutions for a range of time-consuming tasks

GENIE AI

Helping planning teams

(do more) with less

draft

The screenshot displays the Genie AI legal assistant interface. On the left, a chat window titled "Genie - your AI legal assistant" contains the following text: "Hi there! I'm Genie, your AI legal assistant. Feel free to ask me anything about a legal document. Remember, I'm here to help, but my responses aren't legal advice. Learn more [here](#)." Below the chat are three suggested prompts: "Summarise the document in simple terms", "Extract the key commercial terms in the document", and "Identify where the key liabilities lie in the document". The main area shows a document editor for a "Section 106 Agreement". The document text includes: "This Agreement is made on the [DAY] day of [MONTH] [YEAR] Between [LOCAL PLANNING AUTHORITY] And:". The interface also shows a top bar with "9999 AI uses left", "EDITING" mode, and various navigation icons.

Showcase:**

Mycelia

November 2024

Mycelia helps Local Planning Authorities manage ecology and BNG

Mycelia is tailor-made to support local government teams with ecology, including every aspect of Biodiversity Net Gain – from validation and assessment, to monitoring and reporting.

Mycelia helps ecologists, planners and validation officers to:

Save time

Drive better environmental outcomes

Catch and manage risks

Generate value for money

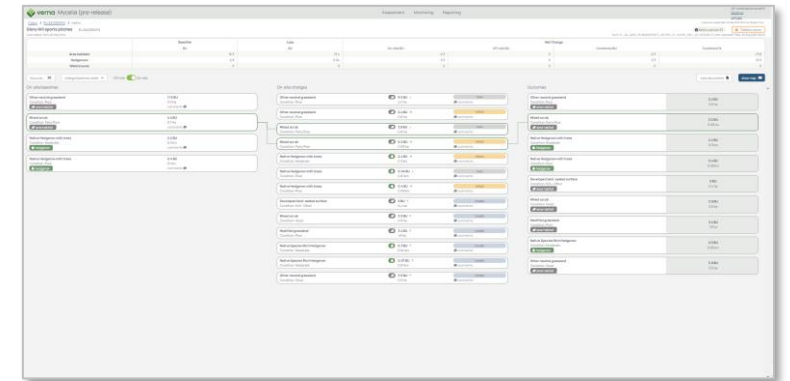

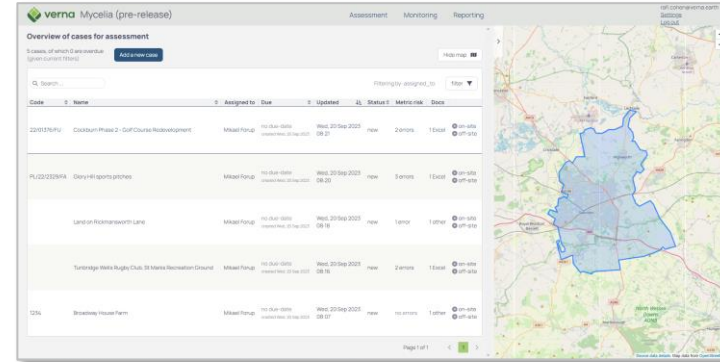

“Mycelia is brilliant, we love the software. We really appreciate the simplicity and user friendliness of the tool.”

Simone, Ecologist, Hammersmith
and Fulham Council

Example: Mycelia cuts the time needed to review BNG Metrics by 80%+

Substrate and area		Disturbance	Condition	Strategic significance			Regional notes to address habitat losses	Ecological benefits	Notes	
Habitat type	Area (hectares)	Disturbance	Score	Strategic significance	Strategic significance multiplier	Strategic significance multiplier	Regional notes to address habitat losses	Total habitat value	Area retained	Area enhanced
Woodland	0.03	Low	4	Strategic significance not in local strategic as local strategic	1	1	None identified or better habitat available	0.12	0	0
Other natural grassland	2.23	Medium	4	Strategic significance not in local strategic as local strategic	1	1	None identified or better habitat available	8.92	0.31	0
Mixed scrub	1.1	Medium	4	Poor	1	1	Strategic significance not in local strategic as local strategic	4.80	0.09	0
Lake	0.02	Medium	4	Poor	1	1	Strategic significance not in local strategic as local strategic	0.48	0	0
Urban	1.73	Very low	0	Strategic significance not in local strategic as local strategic	1	1	Strategic significance not in local strategic as local strategic	0.00	0	0
Urban	0.23	High	0	Medium	2	1	Strategic significance not in local strategic as local strategic	3.36	0	0
Urban	2.4	Low	2	Poor	1	1	Strategic significance not in local strategic as local strategic	14.40	0	0
Urban	0.27	Low	2	Poor	1	1	Strategic significance not in local strategic as local strategic	0.48	0	0
Urban	0.91	Low	2	Poor	1	1	Notes were formally identified in local strategic	2.23	0	0
Woodland with forest	0.1	High	0	Good	3	1	Notes were formally identified in local strategic	0.37	0.3	0
Woodland with forest	2.3	Medium	4	Medium	2	1	Notes were formally identified in local strategic	23.76	0.249	0
Woodland with scrub	0.1	Medium	4	Poor	1	1	Notes were formally identified in local strategic	0.48	0	0

x18

“Mycelia allows me to review Metrics more quickly – for example 30 minutes instead of 2.5 hours for a relatively straightforward Metric”.

Danielle, Biodiversity and Countryside Officer, Cotswold District Council

Mycelia helps solve the new challenges of ecology and BNG...

Ecological monitoring and reporting

“Mycelia has made it so easy to track habitats and pick out those bits in the Metric that are not quite right.”

Carolyn, Ecology Officer, Isle of Wight Council

Validation and determination

“Everyone in the planning community needs to realise how difficult it would be to do all the validation and assessment work without Mycelia, and the hours and days saved by the software.”

Lisa, Ecologist, Eastleigh Borough Council

Whatever comes next

“It gives us confidence that we know Verna is there for us, as a fountain of knowledge on BNG.”

Sarah, Ecologist, Eastleigh Borough Council

...and grasp the new opportunities

Better local environments

“Mycelia helps me to focus on important ecological considerations, helping improve environmental outcomes.”

Des, Ecologist, Swindon Borough Council

Revenue and resources for councils

“We’re getting all the benefits of Mycelia, at zero cost to the council”

Sarah, Ecologist, Eastleigh Borough Council

Supporting and retaining ecologists

“If I ever leave Doncaster, I won’t go to a council that doesn’t have Mycelia.”

Helen, Principal Ecologist, Doncaster Council

Come and join the conversation...

We're always looking to develop Mycelia based on what councils need, so all feedback is welcome!

1. Grab us today if you're here.
2. Email us on mycelia@verna.earth to book a demo.
3. Find out more about Mycelia, and hear from the councils using it, at verna.earth/mycelia/about.

the future fox

Annette Jezierska | CEO | annette@thefuturefox.com

The Future Fox is leading the way in providing AI-powered solutions for community engagement

We save you time and money by eliminating the manual, repetitive tasks involved in launching, analysing, and reporting on consultations.

Reasons for objections

Traffic impacts	457 respondents, 31%	View
Public transport accessibility	446 respondents, 30%	View
Supporting infrastructure	369 respondents, 25%	View
Need for additional housing	166 respondents, 11%	View
Green belt land	98 respondents, 7%	View
Heritage	72 respondents, 5%	View

Features

Summarises long comments.

Identifies key themes and categorises comments.

Provides a summary table showing the number and percentage of comments related to each theme.

Delivers a downloadable summary report with both quantitative and qualitative summaries of the representations.

Reports are provided as editable docx files, ready for further editing and inclusion in the case officer's report.

Easy data upload.

Benefits

Saves days of case officer time on each planning application

Saves significant costs annually

Analyses unlimited volume of public feedback data

Meets tight reporting deadlines

Generates reports ready for submission to the planning committee

Eliminates manual, repetitive tasks

Improving local places

Expert panel

Rikesh Shah

Head of Innovation Procurement Empowerment Centre, Connected Places Catapult

Luke Graham

Head Of Research & Strategic Insights, Pi Labs

Isabelle Chatel de Brancion

Business and Innovation Lead, Geovation

Background

This is a challenge felt across the sector..

The challenge

What is the challenge?

- How can AI and smart tech tools improve local places through optimising the delivery of services?

This is a unique challenge for councils to:

- Ensure resident's **public environments are clean and safe**
- Use **data-based insights to prioritise and optimise service delivery**, across services such as waste, litter, traffic incident and public transport planning and management
- Leverage smart technology to **monitor and support damp and mould management** in homes

- Rising costs
- Constrained funding
- Need for economic growth
- Changing demographics
- Changing behaviours
- Emissions reduction targets
- Engaged stakeholders
- ...and more

podaris

Empower interdisciplinary teams to explore concepts together, in real-time, on a **shared web-based platform**. Changes are immediately visible to all users, allowing teams to work collaboratively with unprecedented ease and agility, reducing feedback loops from months to milliseconds.

Built for **real-time** collaboration

www.podaris.com

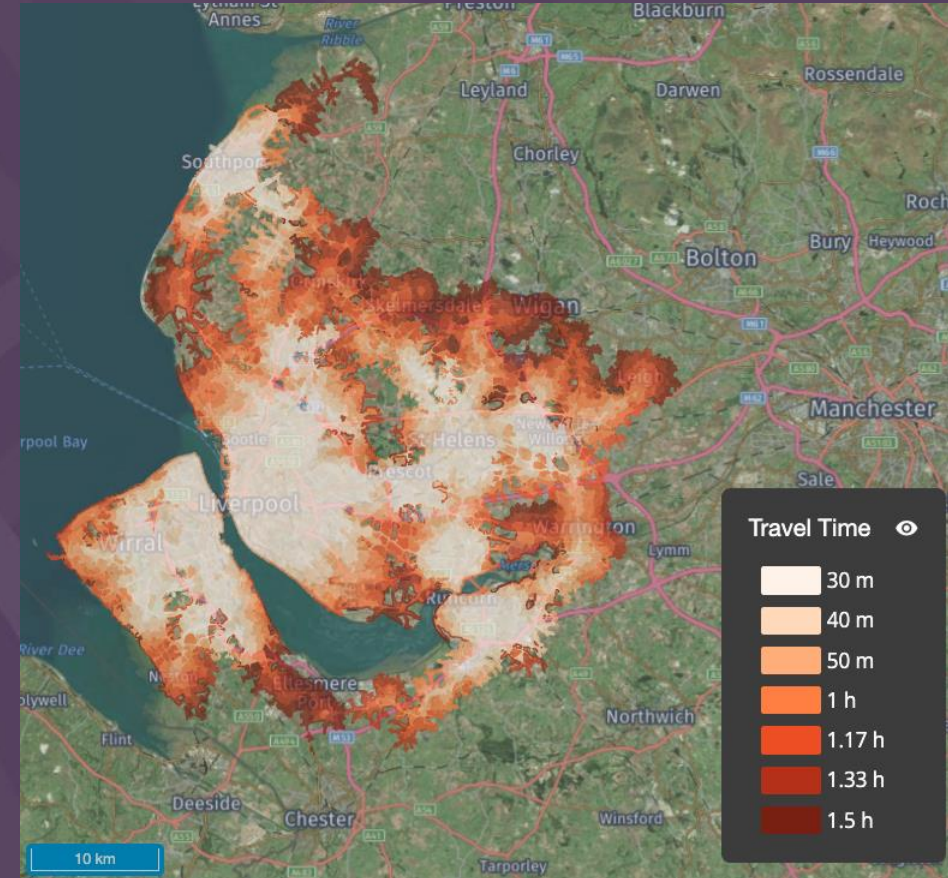

Case Study: Supporting Franchising

LIVERPOOL
CITY REGION
COMBINED AUTHORITY

METRO MAYOR
LIVERPOOL CITY REGION

- Podaris is LCRCRA's primary platform for bus network planning and analysis.
- The platform is used to analyse accessibility to bus services and assess the benefits and impacts of new routes or proposed changes.
- A key use of the platform is support the transition to a franchised network.
- Podaris is being used to understand the connectivity changes of proposed franchising phases, reporting on metrics such as the impact of resident's access to healthcare.

How Podaris Supported East Sussex in Developing their Enhanced Partnership

Appendix Figure 3: Eastbourne Bus Rapid Transit 'BRT - West - Upperton Road south of the A259/A2270 junction

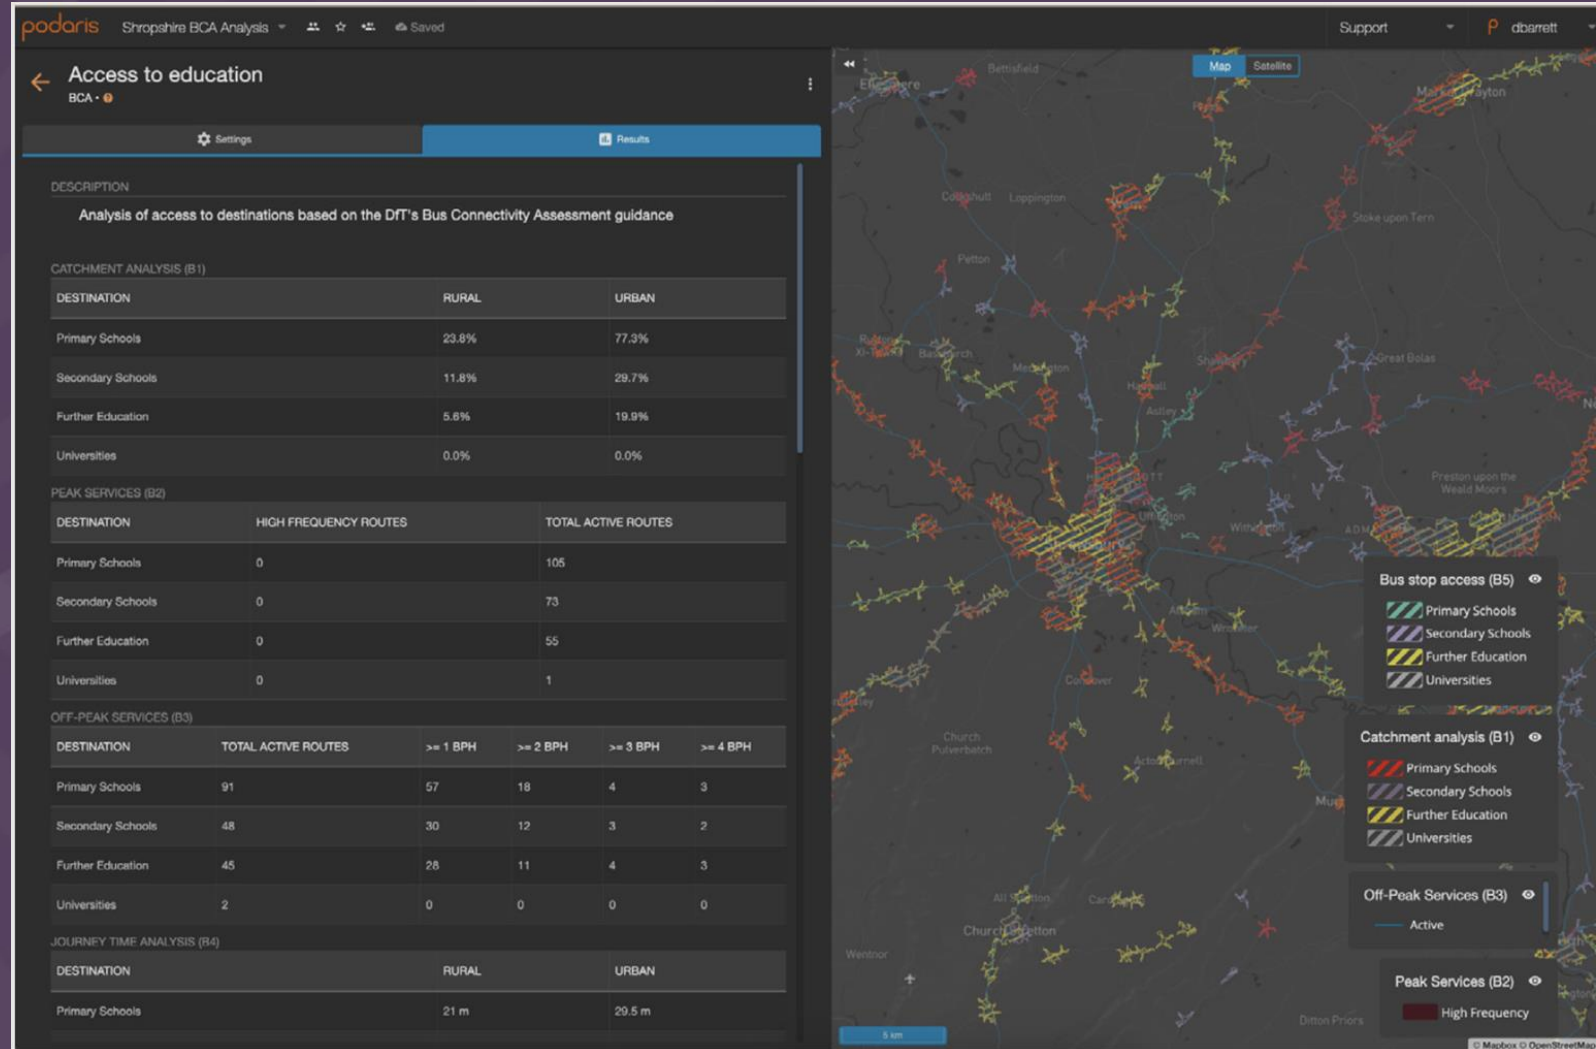

Appendix Figure 4: Eastbourne Bus Rapid Transit 'BRT - East - A259 Seaside Road/Seaside and St Anthony's Avenue to the southwest and northeast of Seaside roundabout

Since their first BSIP, which resulted in an award of £41.4m, East Sussex (ESCC) have used Podaris to support their ambitious enhancements to the bus network.

Feedback from public and stakeholder engagement highlighted the need for faster and more reliable services as being the top priorities.

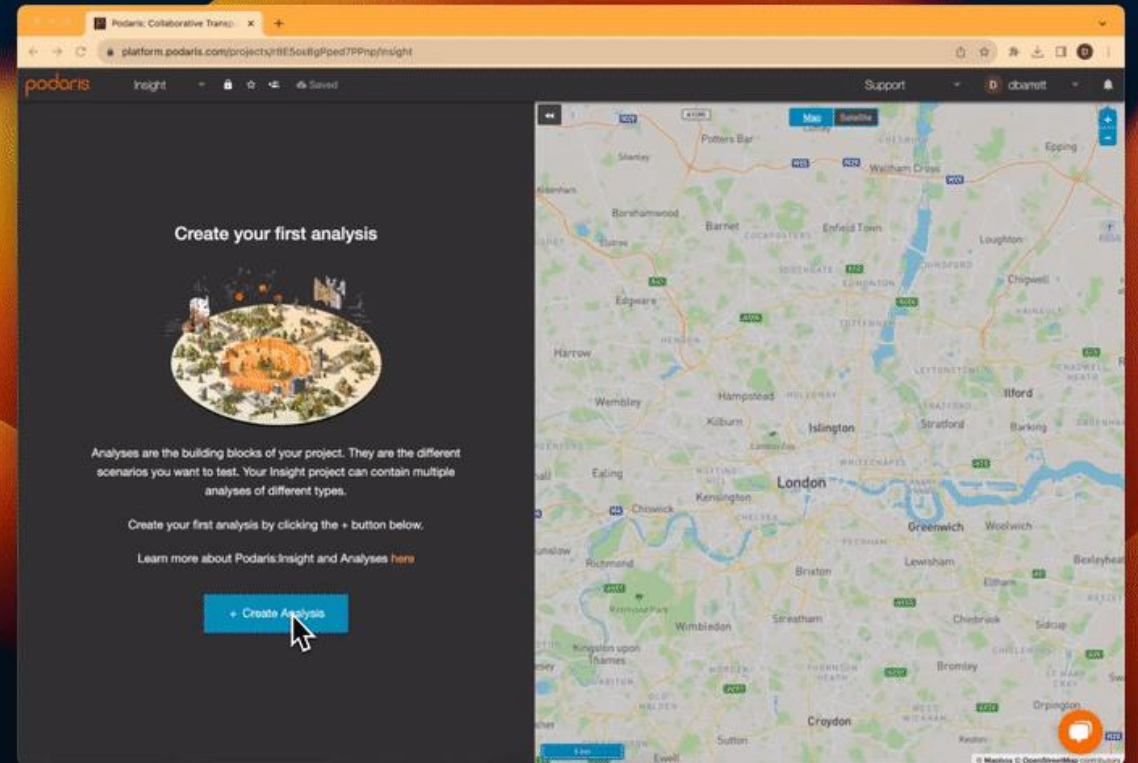

Podaris was used to build the evidence base due to service delays and analyse the potential benefits for the seven proposed bus priority corridors.

- DFT Required all English Local Transport Authorities to submit Bus Connectivity Assessments.
- Complex analysis could have taken weeks of effort for each.
- Podaris Insight engine quickly enhanced to make the data-wrangling and calculations take minutes rather than weeks.
- Was used with great success by > 20% of all English LTAs

- At the core of Podaris:Insight is a library of common and emerging accessibility metrics.
- Sensible defaults allow anyone to generate rich insights instantly.
- Easily configurable parameters and data sources save the need for building custom processes and solutions.
- New analysis types are added constantly.

Immense

The Simulation Platform for effective
impact assessments

Barrier: Planning, operating & maintaining transport

Transport decision-making processes involve answering questions

OLD METHOD

Siloed Planning & Operations

Increasing time and cost per question

NEW METHOD

Integrated Solution

Data, technology and modelling capability are ushering a new paradigm for transport simulation

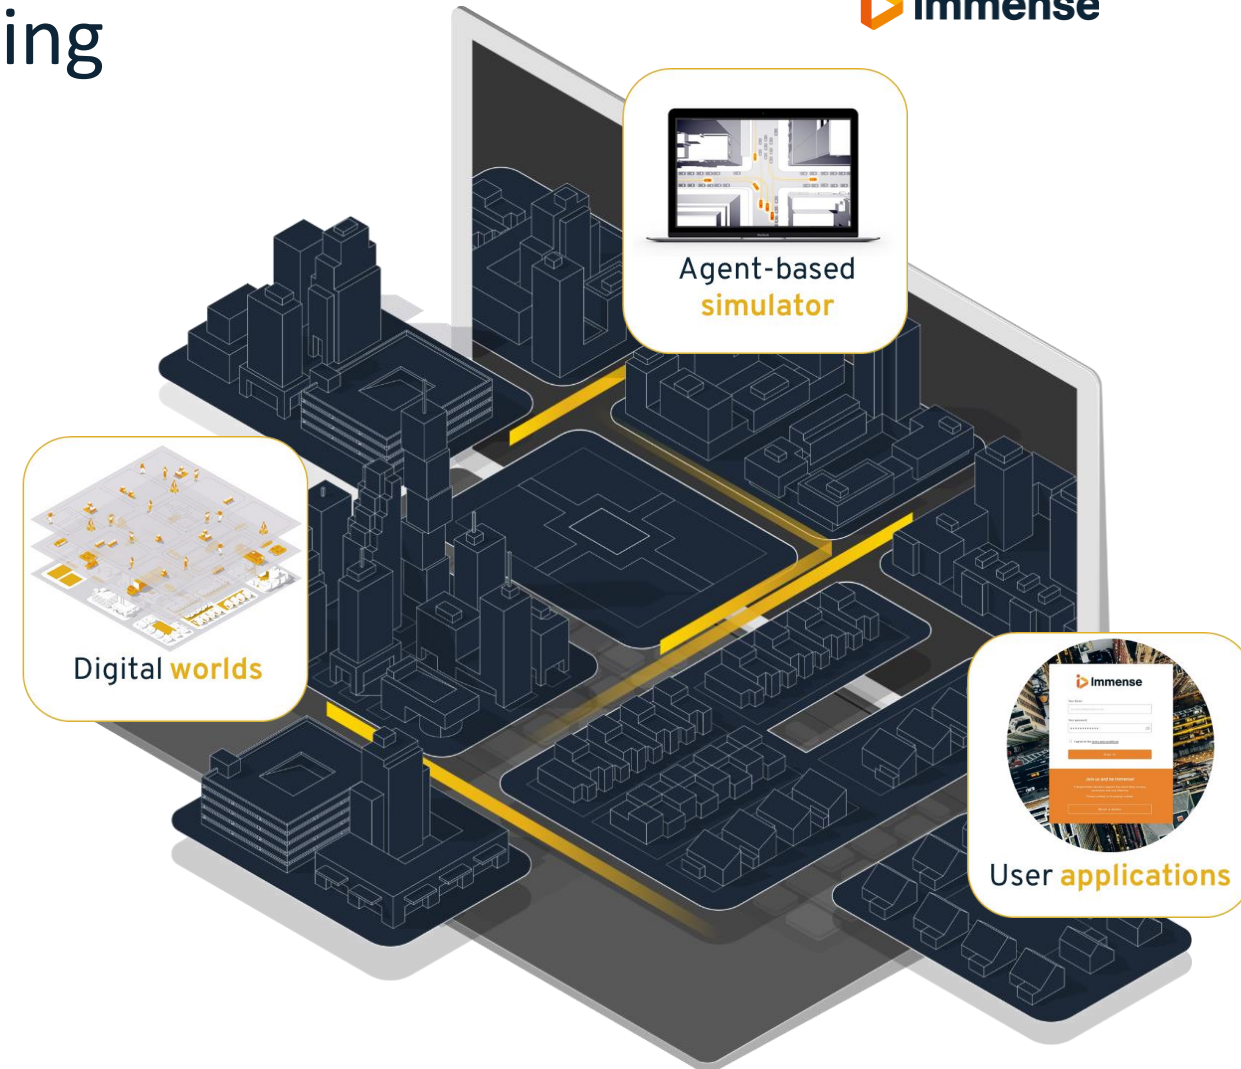

Reduced time and cost per question

Solution: Simulation-as-a-Service for Transport and Infrastructure Planning

Making accurate scenario forecasts available on demand

- ▶ Quantified impact assessments for cost, time, energy and emissions produced for each alternative plan
- ▶ Accessible, map-based applications to empower a wide-range of users and share insights
- ▶ API integrations to provide customer workflows “powered by Immense” and bespoke reports
- ▶ Cutting-edge agent-based simulation capability available and scalable across large areas
- ▶ Global data coverage from trusted partnerships including public sector revenue share opportunity
- ▶ Provided on subscription with managed services and support to empower end-user teams

Highly granular agent-based sim

Rapid deployment around the world

API driven for easy integration

Established data pipelines

National Coverage

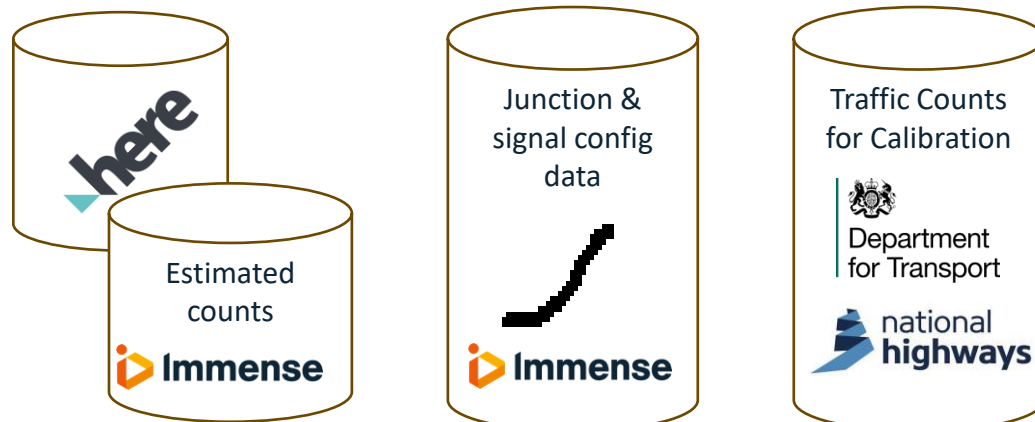

Provides National behaviour

Select study area

Provides local detail

Automated Calibration with Human-in-the-loop QA

Activities & primary routes

Traffic management

Calibrated World model

Immense integrates data and supervised automation to provide high quality model

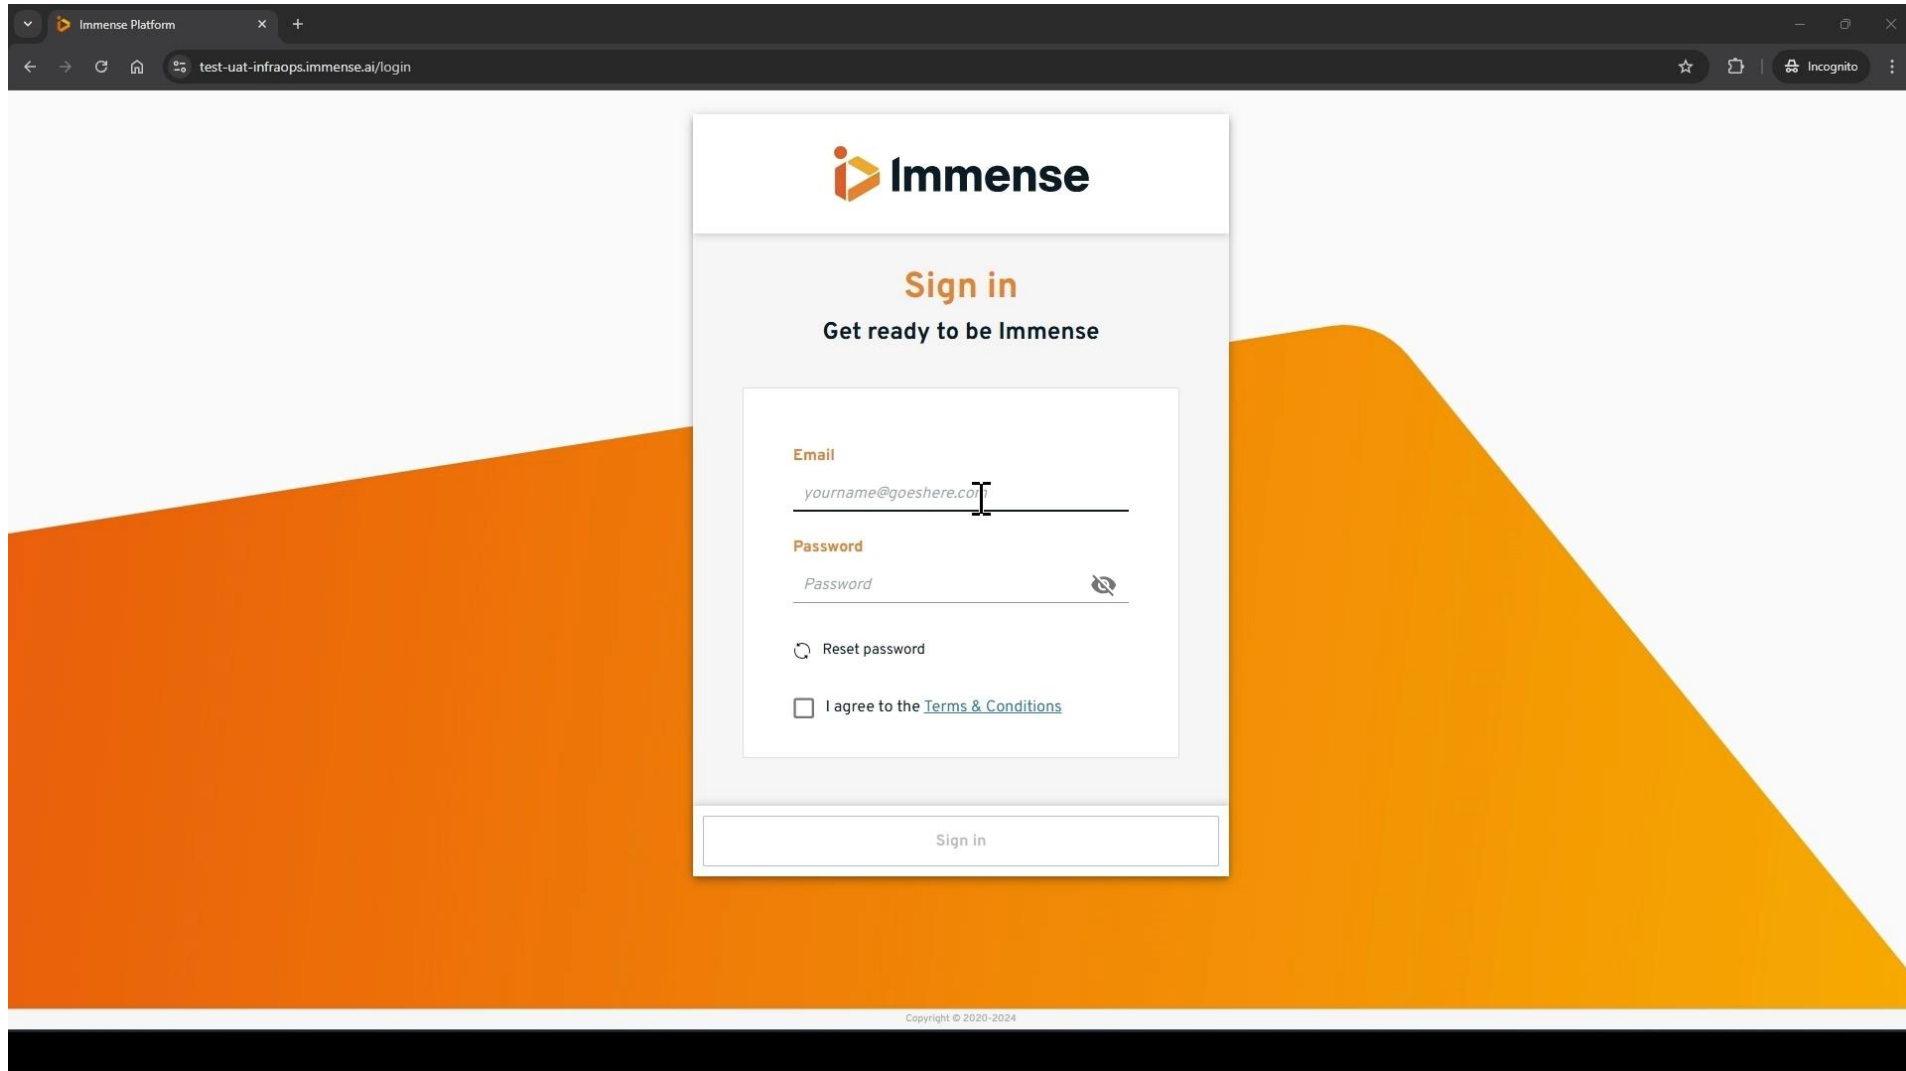

Validated Models

Validation Reports

Provides assurance against independent data

Easy, accessible Transport Impact Assessments

Scenario Impact Assessment Reports

40% of motorists are aware of the disruption and are able to avoid the road network effects.

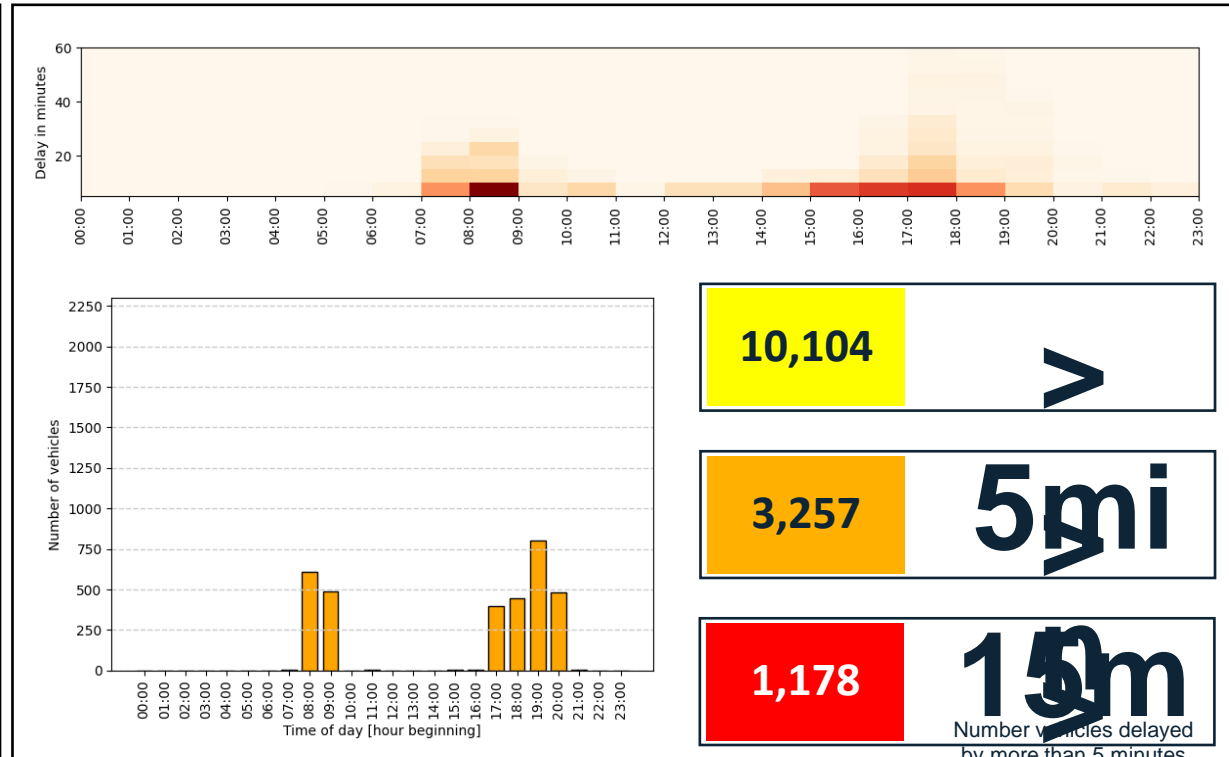

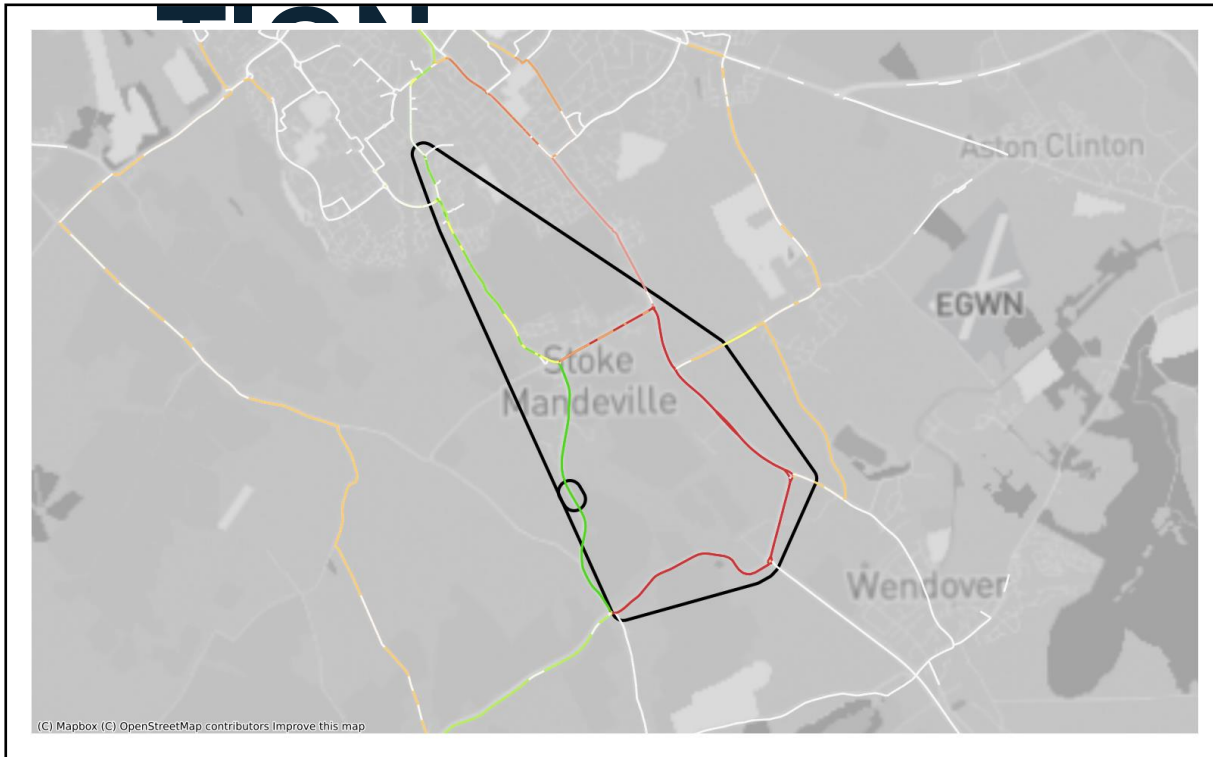

DISRUPT

CRITICAL

Up to 5000 motorists delayed by more than 15 minutes during a peak day assuming 5.0% of motorists are aware of the works.

DELAY

VERY HIGH

Overall, this scenario is categorised CRITICAL, with VERY HIGH level of delays and CRITICAL number of drivers needing to be aware of the disruptions.

OVERALL

CRITICAL

Number of vehicles delayed by more than 15 minutes

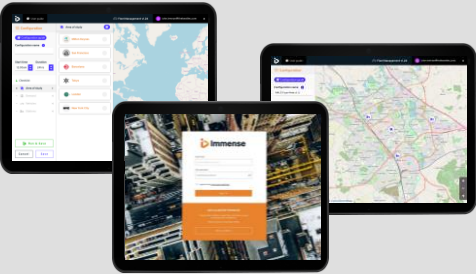

Products: One Immense platform, multiple applications, accessible insights

In each case scenario simulation quantifies costs, time, energy, carbon and other indicators for each plan

Fleet Operations

Test the deployment of on-demand fleets with new service models and vehicle technologies

Infrastructure Operations

Manage congested networks more effectively by simulating disruption and response

Regional Planning

Plan and design the deployment of new transport infrastructure, housing and employment sites

Partnerships and anchoring: Infrastructure Planning and Operations Co-creation with UK public sector

Our simulation platform powers public sector applications to assess infrastructure planning and operational use cases supporting Local, Regional and National customer groups with differentiated products and data

Department
for Transport

Creating a simulation platform suitable for use in control centre environments

- On-the-ground engagement with users to capture requirements
- Creation of productised workflow to generate insights for users
- Deliver and test of pre-production system

Leveraging real-time data to improve operational decision for traffic management

- Integration of RT data feeds to simulation platform
- Work with proto-client (Oxfordshire) to provide UX insight
- Enable improved traffic management and response strategies

Deploying a next-generation simulation platform for transport and infrastructure planning

- Simulation of transport and infrastructure for Oxfordshire
- Used to assess the impact of housing or employment sites and infrastructure
- Vastly improved workflow for fast, iterative transport modelling

Reinventing roadworks planning, impact analysis and collaboration with the utility industry

- Collaboratively plan roadworks across London
- Increase confidence in decision-making around roadworks planning
- Provide additional simulation tooling to support efforts to improve road safety

ISO27001 accredited, registered on digital portals and an AWS Validated Partner

Delivery Team: Leadership bios

Robin North MEng PhD
CEO & Co-founder

www.linkedin.com/in/robin-north

Transport industry specialist engineer with 20+ years' experience in analysis, modelling and research. Former faculty member at Imperial College and Lead Technologist at Transport Systems Catapult. Led Immense from concept, through technology development to form global partnerships and bring our products to market.

Didac Busquets BSc PhD
Chief Scientist & Co-founder

www.linkedin.com/in/didac-busquets

A computer scientist specialised in AI and agent-based simulation. Able to “think outside the box” and provide creative solutions to challenging transport problems. Background in academia and R&D programmes; Marie Curie Fellow (Imperial) and Fulbright Scholar (Carnegie Mellon). Led development of core simulation platform capabilities.

Carl Goves BSc MSc CEng
Chief Engineer & Co-founder

www.linkedin.com/in/carl-goves

Expert transport modeller and Chartered Engineer specialised in novel data and analytic methods for confident appraisal of strategic transport systems interventions. International engineering consultancy background (PB, public authorities) and the London Olympic Games winning award for ‘Greatest Contribution to London’ in 2013. Led development of modelling approaches and workflow automation.

Vittoria Parisi BEng MEng MSc
Head of Product Delivery

<https://www.linkedin.com/in/vittoria-parisi>

Product lead with transport modelling and Civil Engineering background. Expertise in public sector implementation of modelling workflows and analyses including delivery to major UK and international clients. Responsible for product roadmap & customer success.

LGA Showcase

Alchera for Local Authorities

November 2024

Contact: Tom McKenna

Tom@alchertechnologies.com

Alchera Technologies: data-driven mobility experts.

Alchera is a specialist in enterprise-grade mobility and infrastructure systems, providing software tools and machine learning to power data-driven infrastructure.

Alchera specialises in helping operators of road networks to maximise operational and commercial value of fragmented mobility data.

Our flagship platform, analyses & fuses data in real-time from existing sensors across the road network - including cameras, connected vehicles, GPS and IoT sensors - providing auditable access to relevant stakeholder groups both internally and externally where data can be shared for wider impact.

250+

YEARS OF INDUSTRY EXPERIENCE

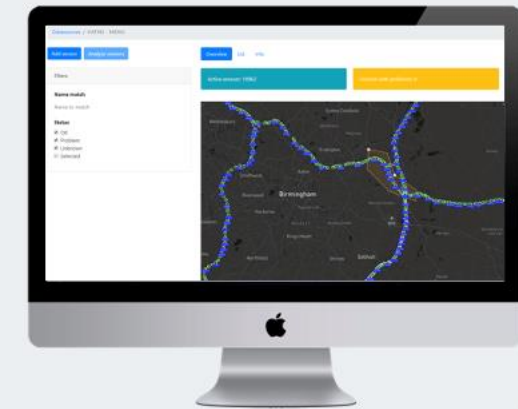

20+

PEER-REVIEWED PAPERS

TEAM EXPERTISE

SELECTION OF OUR CUSTOMERS

Alchera Data Hub: Get the most out of your mobility infrastructure.

Alchera automates data collection, analytics and reporting for all your mobility data so you can focus on addressing the big picture.

WHAT DOES THE ALCHERA PLATFORM DO?

All your historic and real-time data in one place. Quality checked, cleaned, enhanced and monitored. Easy to access for internal and external teams.

Analytics & Machine Learning, to fuse data and produce the key KPIs & insights you need as evidence to inform key decisions.

Alchera Data Hub: unlocking mobility data across the ecosystem.

Alchera has an extensive library of data connectors and builds new connectors for mobility sources free of charge. Additional data sources can be added (including importing historical data) at any time.

- Fully managed data pipelines
- ✓ The ability for data providers to push data to the Data Hub in real-time
- ✓ The ability for Alchera to pull data from providers on any agreed schedule
- ✓ Transformation and normalisation of data as it comes into the Data Hub
- Full pipeline monitoring to identify upstream outages – notification to both the client and the data provider of any data gaps
- ✓ Catch up mechanism for upstream outages, enabling data to be backfilled and maintain data integrity (where available from the data provider)

A sample of some of the data sources Alchera regularly uses.

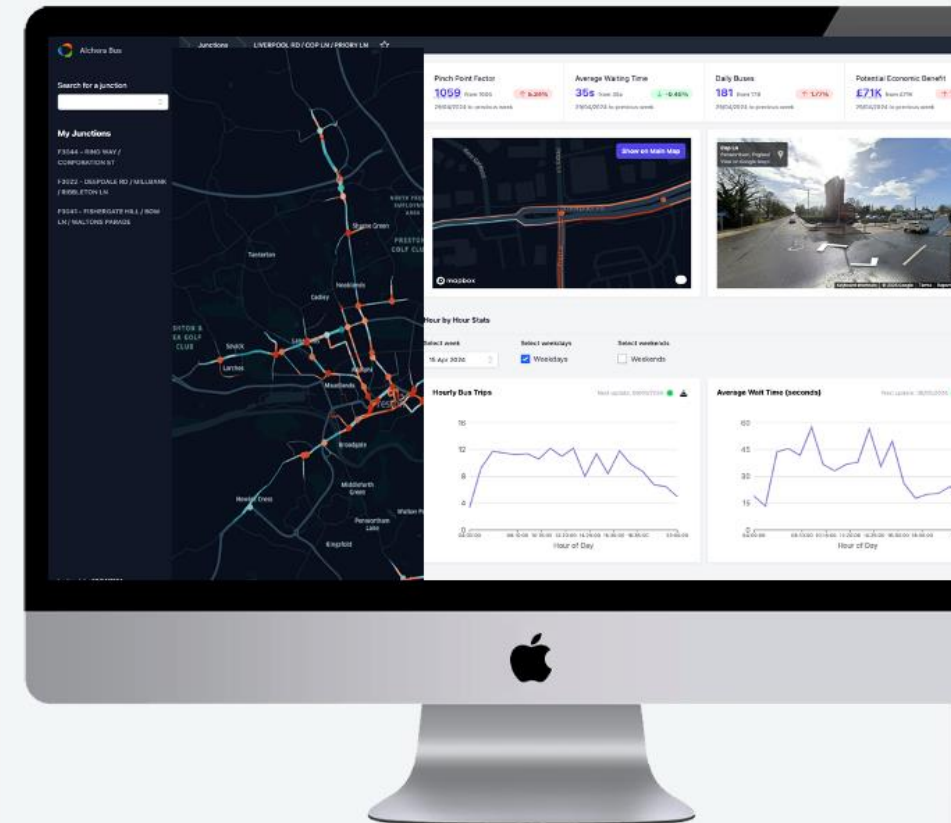

Alchera Bus: insight from infrastructure to get the most out of bus networks.

Alchera Bus is used by Local Authorities, transport bodies and their supply chain, to gain visibility of the local bus network.

The tool can help investigate historical & real-time bus activity to monitor, evaluate and improve bus networks, to unlock better decisions on timetables, signal interventions and prioritised investment.

- ✓ measuring & monitoring key KPIs, such as reliability, punctuality, average speed and patronage.
- ✓ systematically identifying “pinch points” – individual road segments and junctions within corridors where buses are being slowed down or have high variability in the time it takes buses to pass through.

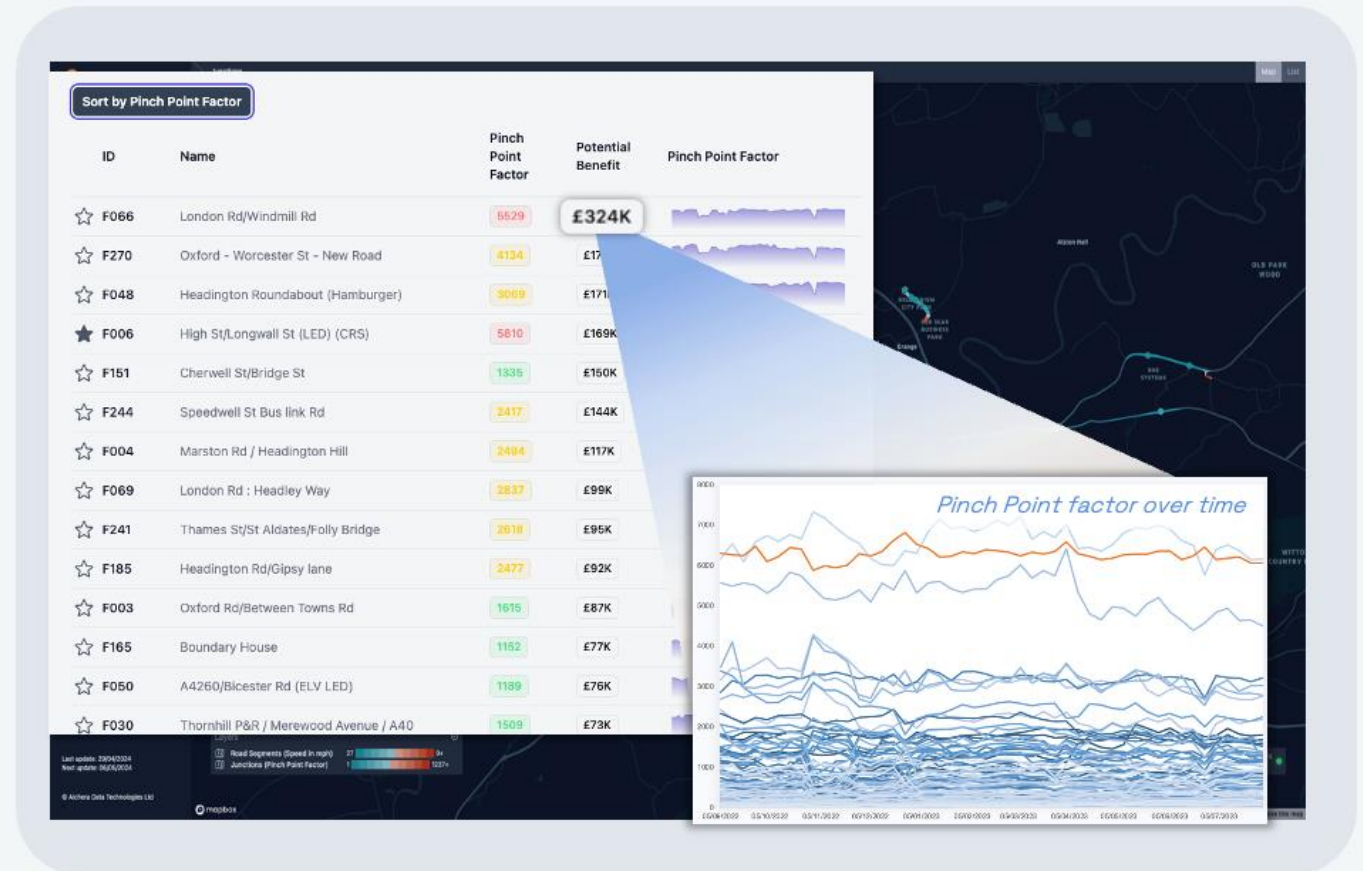

These insights provide data-driven evidence to target junction/corridor level improvements to improve the free-flow of buses an networks for all.

Alchera Bus: powerful analytics quantifying and ranking pinch points.

Proprietary analytics build upon robust data pipelines, taking raw BODS data and other data sources, to calculate a validated “pinch point” metric and economic benefit calculation.

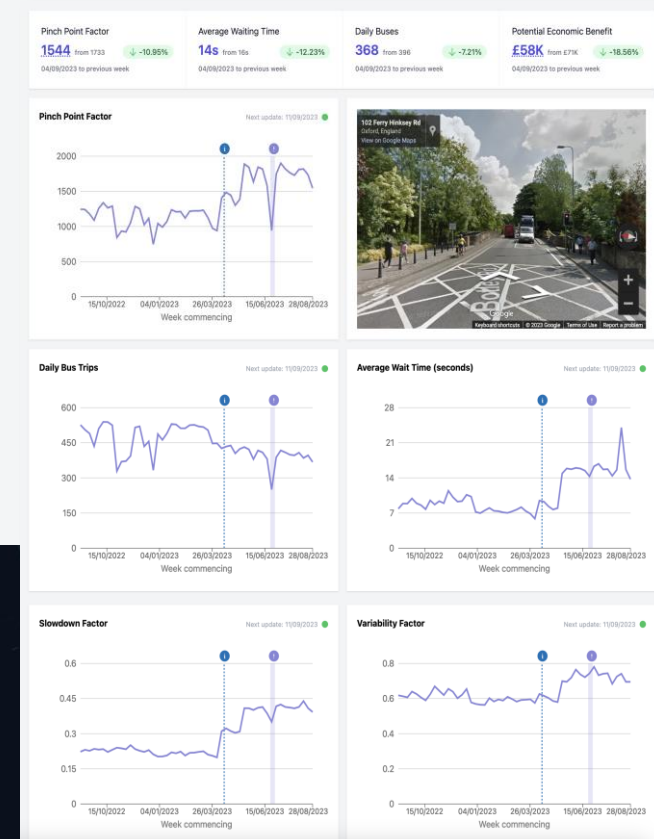

-  Quickly identify the “worst” junctions on the network
-  Quantify economic impact of junction improvements
-  Validate & maintain forecast benefits of interventions

Alchera Bus: monitor interventions and validate.

Alchera Bus can be deployed “always on” or as a single analysis, performed multiple times over the year, using a repeatable approach.

This allows users to investigate previous decisions and validate that areas flagged for improvement, are supported by data and provide the greatest economic gains for the region, accounting for improvements already implemented in the network, in addition to any other external factors.

Alchera Technologies: experts in delivering AI for productivity in infrastructure.

Validated metrics

Key KPIs to ground decisions. Granular, quantifiable and comparable metrics across all of the mobility network, covering multiple travel modes. To include metrics such as journey times, reliability, trip counts and wait times.

Tools for investigation

Easy to explore user interfaces, increasing accessibility to data and removing barriers to sharing. Maximise the use of data for monitoring, validating decisions and evidencing the return on investments.

Repeatable capability

Opportunity to easily re-run analytics. Solutions allowing for future and real time monitoring and evaluation requirements, completed using identical criteria, providing a ready-made report for internal and external stakeholders.

Workflows behind problems

Investigating, understanding, and improving with purpose-built AI.

Integration with legacy systems

Data inputs and dashboard / tool outputs to ensure adoption & benefit realisation.

Machine Learning experts

Experienced deployments of data science & modelling, extracting insights from mobility & geospatial data.

Thank you for listening. Questions?

Empowering ethical and safe procurement of AI

Procuring AI that works for people and society

LGA Tech Innovation Showcase
November 2024

Independent research institute with a mission to
'make data and AI work for people and society'

Background and context

- Expectations and optimism about AI improving public services
- But AI and data-driven systems can have harmful impacts and damage public trust if not used carefully
- Public sector is held to a higher account than private sector on equalities (PSED)
- Procurement is an important process in deciding what and how technologies get used for public services
- Local government an interesting case study, due to the expectation of a lot of direct to community service provision – including working with some of the most vulnerable populations – amid huge resource pressures

Can procurement be a lever for *achieving societal benefit* from data and AI technologies?

- **If so, how?**
- Do procurement teams have the infrastructure, support and guidance to ensure AI buying decisions lead to societal benefit?
- What are the challenges or opportunities that exist for procurers to achieve positive societal outcomes when procuring data and AI technologies

Methods

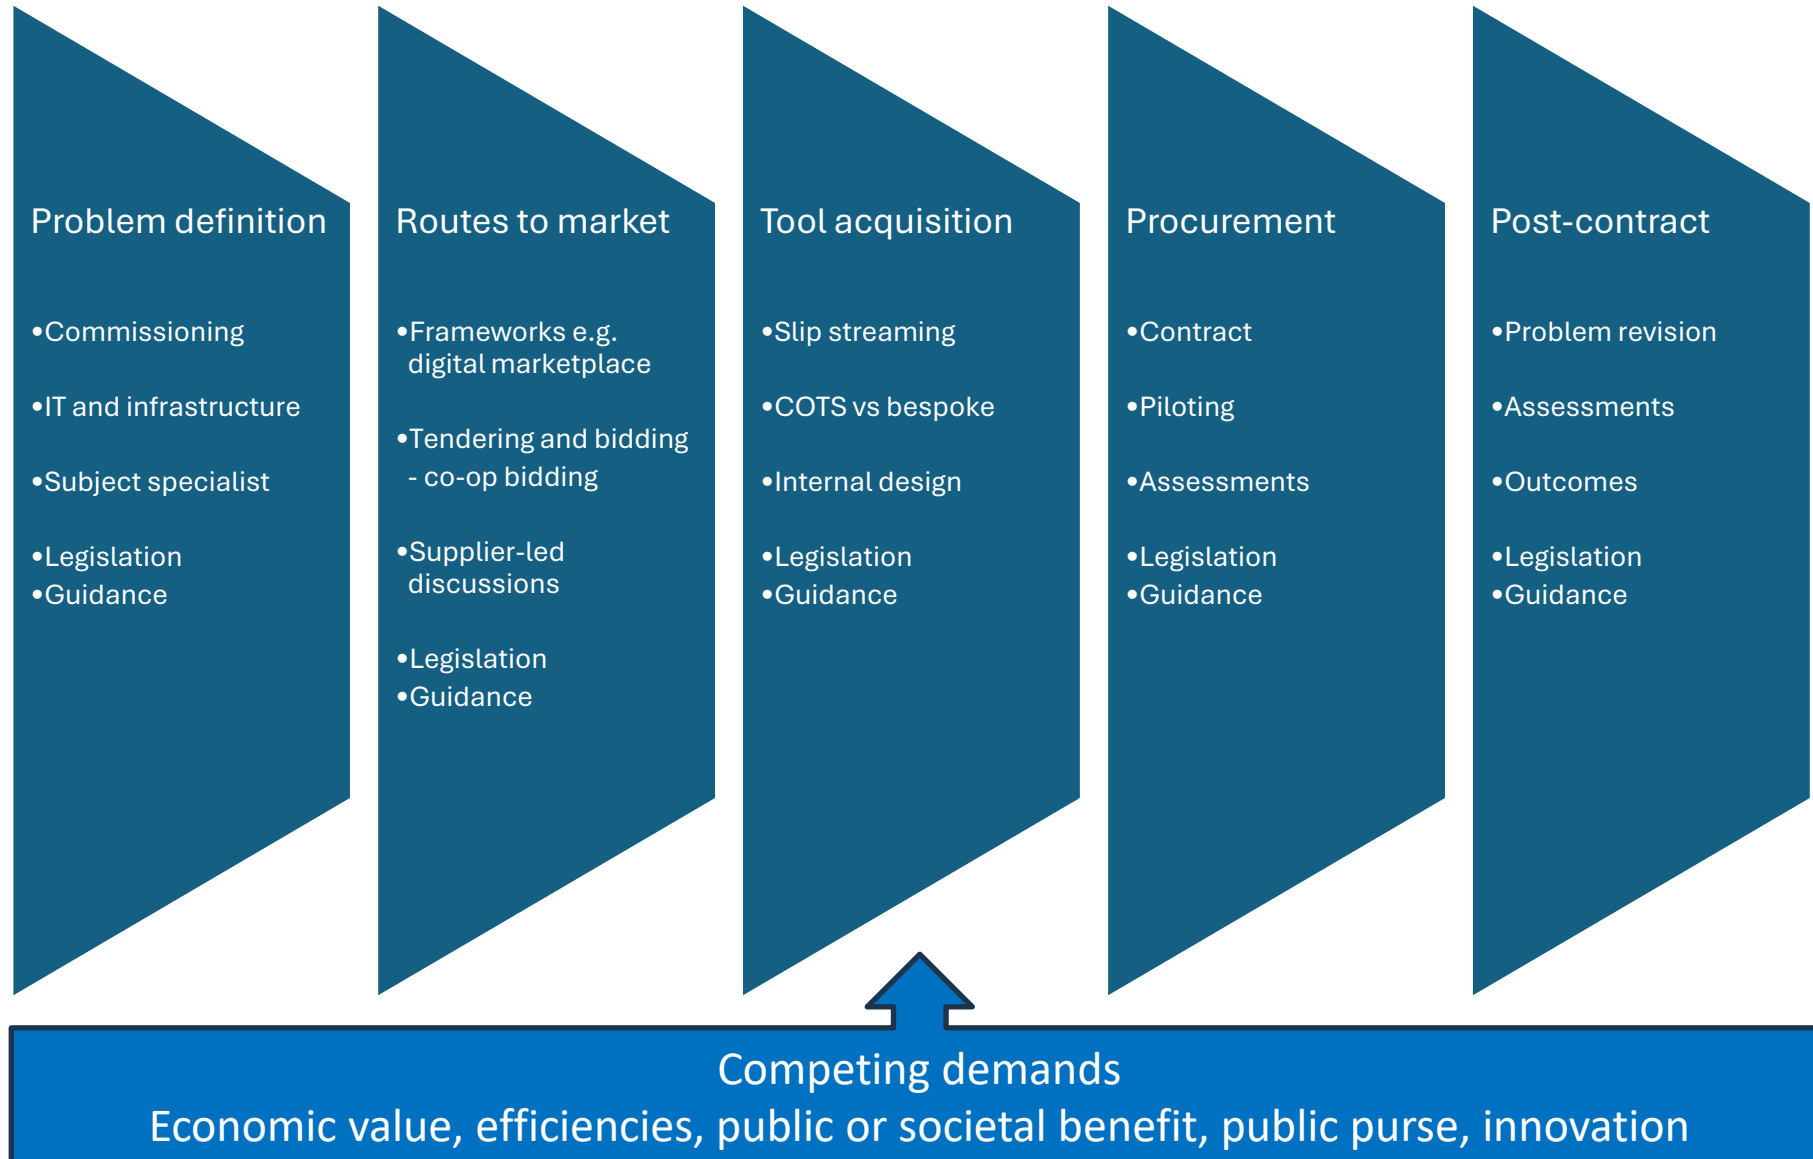

- A **document analysis** of guidelines and legislation supporting procurers aim for or assess social benefit
 - public engagement, inequalities/bias/fairness, transparency, public benefit/social value, and impact
- **Cross-industry discussions and workshop** of challenges and opportunities when procurers are buying AI technologies

	Guidelines for AI Procurement (DSIT, DCMS, BEIS, OAI)	A guide to using AI in the public sector (DSIT, OAI, CDEI (RTA))	Understanding AI ethics and safety (DSIT, OAI, CDEI)	Understanding AI (DSIT, OAI, CDEI)	Assessing whether AI is the right solution (DSIT, OAI, CDEI)	A pro-innovation approach to AI (Government white paper)	Data Ethics Framework (CDDO)	GDPR (ICO guidance)	PSED (EHCR guidance)	Procurement Act (Government Commercial Function summary)	Social Value Act (Cabinet Office and LGA guidance)
(In)equalities /fairness	★	★	★	★		★	★	★	★	★	
Transparency	★		★	★	★	★	★	★	★	★	★
Public engagement						★	★		★		★
Public benefit /social value	★	★		★		★	★			★	★
Impact assessments	★		★			★	★	★			★

Local government does not have access to a clear and comprehensive account of how to procure AI in the public interest

- There are many different terms used to measure societal benefit throughout the procurement guidance and legislation.
- The guidance available to local authorities lacks specificity about how and where to operationalise these themes for societal benefit.
- There is little practical advice on how to engage suppliers in conversations about the broader social impacts of their technologies.
- This is further complicated by a lack of clarity on the definitions of key terms, including 'AI'.

Roadmap – process, challenges and opportunities

Overall findings

Procurement is an essential mechanism for ensuring data and AI work in public sector, but:

Ecosystem currently not equipping LAs with what they need

- Multiple challenges to achieving or assessing positive impact when procuring
 - Confusing landscape of AI (what is it), and associated regulation/guidance
 - Data (needed/shared/valued, responsibility and governance) and (right) infrastructure
 - Technological uncertainty (what it does, how it works, when it is right solution)
 - Knowledge and expertise imbalances – favours tech, forced relationships
 - Failures in market – monopolies, market capture, SME minimised, middlemen/suppliers/developers

Correcting this goes beyond tinkering with guidance

National Taskforce on Procurement of AI in local government

- A need to draw multiple threads together and empower local government
- Our proposal is a National Taskforce on Procurement of AI in local government, to...
 - Align aspirations of central government for AI to the reality and complexity of local government procurement
 - **Work collaboratively across central gov departments and local gov roles** (specifically in local domains: data engineers, commissioners, governance and IT and digital leads, policy and strategy, procurers, contract managers, members of the public) – be led by on-ground-experience and work with existing networks and hubs on the ground
 - Anchor to Procurement Act 2023 implementation

Taskforce remit

1. Unify regulatory and legislative guidance documents in ways that are practicable.
2. Clearly identify metrics for success when using AI in local government, with sector-specific boundaries.
3. Create practical tools, (contract) templates and assessment frameworks which can strengthen local government position in relation to suppliers.
4. Design and recommend a suite of specific skills and training needed for procurement (for critical engagement with suppliers).
 - Support the development of a central organisation that lends impartial advice to local government on any assessments they may be making regarding AI.

Conditions for success

- Fixed term – 3 years
 - Ensure it is transparent and works in open, beyond updates and sharing information
 - Should iterate and respond to emerging concerns
 - Produce outputs regularly to keep its role relevant to changing AI landscape
 - **Link to existing networks and consider policy of secondments for those on the ground to work in/with taskforce**
- Make final recommendations to gov about what needs to change and how, and draw lessons for wider public sector

Slido

<https://app.sli.do/event/upkfrXjbNsS9mWAuFC7Zup>

Considerations for challenge statements...

Public engagement – how & when?

- Inform – Consult – Involve – Collaborate – Empower
- Digital front door – consult/involve digitally excluded communities
- Supporting social care practitioners – collaborate with frontline workers
- Efficiency in planning process, improving local places (even when less obvious direct public engagement) – informing users about what technology is being used, questioning outcomes etc
- But there are many and varied options!

Social Value (and inequalities)

- Social Value as an intrinsic goal and outcome of the technology – e.g. by combatting inequalities
- Improving local places – focus on marginalised communities vs risk of surveillance, longer term – community health outcomes?
- Supporting social care – what does good look like for practitioners and service users? E.g. amount of time spent with a social worker, availability of onward services etc. How would different uses of tech affect this?
 - What is the connection between admin tasks and life-changing results? E.g. prioritisation of services or triage can be automated as an admin task but have profound impact on someone's life?
- Digital front door – what support is needed across communities to help them use these tools, an extra cost to council

Data governance

- Complexities around AI and data use
- Digital front door – hallucinating chatbots (even when the training data is seemingly clear), what happens if advice is wrong?
- Supporting social care – highly sensitive data – how is this managed and protected?
 - Where is the input data coming from (e.g. how often are internal pathways, policies or guidelines updated and when does that get reflected on the AI?)

Transparency

- For local government teams, for communities – what tech is being used, for what, how does it work?
- Efficiency of the planning process – ensuring that systems are explainable to local teams – for auditing and monitoring, as technology progresses
 - For applicants and general public – awareness of how technology is being used for any direct communication or decisions
- Improving local places – again the risk of surveillance and privacy invasion – need to be clear on how tech is being used

General thorny issues across public sector

- Challenge of **scaling** up or down between local and central gov decision-making and mechanisms
- **Influence the infrastructures and mechanisms that cause power imbalances** to hold suppliers to account
- Unsure how **public engagement** can be operationalised
- **Metrics of success** need better clarity on AI harms – encourage knowledge sharing of AI Impacts (better use of ATRS?)
- How to implement change/mechanisms/standards without **extra burden on local gov**

What can local government do?

- **Identify a clear 'goal' for the technology you are procuring**
 - Re-thinking Social Value in light of AI?
- **Commit to meaningful transparency**
 - Transparency for whom – suppliers yes, but also *across council and communities*
 - Clarity on mechanisms
 - Make use of ATRS
- **Set out metrics for success**
 - Revising data ethics, setting out metrics early in the process (and collaboratively)

Government trialling AI to save time on decision-making and reduce ministers' workload

AI is being trialled as a tool for government ministers in an effort to slim down the civil service

Minister talks up AI potential to cut fraud-detection jobs and boost wages

Cabinet Office minister Alex Burghart says government is also exploring AI that could help departments retain institutional memory amid high churn rates

INTERVIEW

Oliver Dowden: AI could reduce ministers' workload

The deputy prime minister reveals that trials have already begun using artificial intelligence to speed up decisions at the heart of government

Minister reveals AI systems employed at the heart of UK government performing tasks that ministers be doing

- Tory MP Alex Burghart has admitted that he uses an experimental AI system to help him read documents
- System was developed by the Cabinet Office to help process information
- Officials tried to install a chatbot on Gov.UK website but it was blocked by French

By IVAN PROTHERO

PUBLISHED: 17:58, 14 January 2024 | UPDATED: 18:06, 14 January 2024

Ministers have already begun using AI systems to read documents and determine which are more important, it has been revealed.

What is the challenge?

As part of their role, social care practitioners undertake crucial tasks, outside of just providing care or support for residents. In these tasks, whether it is writing case summaries or reviewing data from diverse external and internal sources, **practitioners divert time from spending it on delivering quality care services to people in need.** The enabling services for social care practitioners, meanwhile, are also required to perform a number of time-intensive tasks. A wide range of AI and smart tech solutions can support social care practitioners by automating administrative tasks or making non-care-delivery tasks more efficient, allowing them to prioritise delivering quality care service

Challenges facing the sector

Budget cuts

Resource constraints

Increased demand and
waiting times

Nature of the specific Challenge

Tasks Beyond Delivery

Writing case summaries
Reviewing data from diverse
sources

Time Diversion

Administrative tasks take time
away from delivery

Time-Intensive Tasks

Performing numerous and
repetitive administrative tasks

Resource and Time Constraints

Lack of Resources and Time

Councils struggle with limited resources
Insufficient time for experimenting with novel use cases
Challenges in triaging information from diverse data systems

Manual Processes in Care Delivery

Many councils rely on manual processes
Use of simple spreadsheets for information processing
Manual methods hinder efficiency and effectiveness

Proportionate?

Care Management

Impact on Practitioners

**PRACTITIONERS MUST BE
EMPOWERED TO SUPPORT
PEOPLE THROUGH QUALITY
CONVERSATIONS**

**PRACTITIONERS MUST BE
SUPPORTED FULLY WITH
DIGITAL SKILLS TO EMBRACE
NEW TECHNOLOGY**

**AI MUST NOT BE SEEN AS A
TOOL TO REPLACE
PRACTITIONERS OR EXPECT
AN INCREASED CASE LOAD**

How can AI and smart technology...?

Reduce the administrative burden on adult and child social work practitioners?

Streamline the assessment process to reduce waiting lists?

Help practitioners generate accurate, real-time case summaries?

Provide concise information drawn from several internal and external data systems as part of a duty or triage approach to allocating cases to practitioners?

Improve the timeliness, safety, and accuracy of support for people at the point of discharge from hospital?

Map budgetary spend against Social Work team performance indicators, in real time, and improve the understanding of senior leaders of how the current level of resourcing?

How can AI and smart technology...?

Automate complex rotas and scheduling to remove the manual burden without the loss of personalisation and maintain safeguarding?

Improve the efficiency of the care planning and review process?

Anticipate when there are opportunities for earlier intervention?

Support practitioners with the management of care coordination and caseloads?

Support the assessment process, reducing the administration burden when multiple agencies are contributing to an assessment?

Allow data to flow between diverse systems with minimal human intervention?

Data Governance and Security

Ensuring Interoperability and Accountability

Robust data governance is essential
Assurance of solutions is necessary

Managing High-Risk Data

Health data is often high-risk
Data security is critical

emma

Artificial Intelligence powered Social Workers

- Over **7** years' experience in operating three homecare organizations across Essex.
- Acquired Ashley Care in 2022 and raised the CQC rating from "**Inadequate**" to "**Good**" in 18 months.
- Discharged over **4000** patients from 3 key hospitals in Mid and South Essex ICS through both Bridging and Reablement services over the last 2 years.
- **Innovation fellow 2023** at Mid and South Essex Integrated Care System (NHS).
- Featured in the CQC "**capturing innovation to accelerate improvement**" white paper and the **State of Care report 2023** for innovation in admission avoidance.

Assessing Care in the UK – Care Act Assessment

450,000

The amount of people the **Association of Directors of Adult Social Services** (ADASS) estimates have been waiting for an **assessment, review, direct payment or care package** at any one time since 2021.

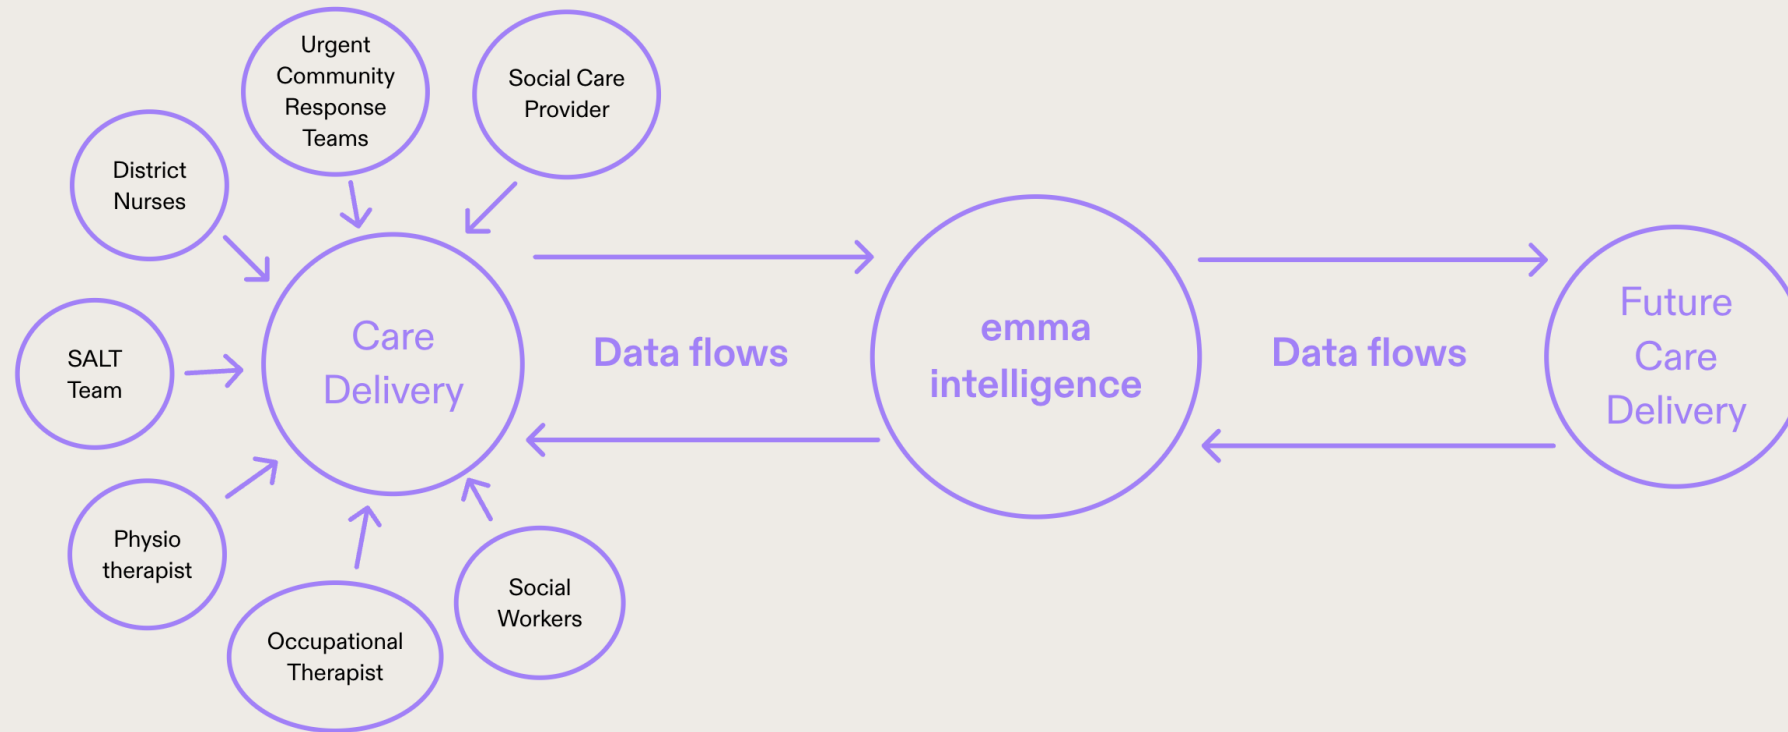

250,000

People are awaiting an **assessment** of their Adult Social Care Needs reported by **The Kings Fund 2024** (Social Care 360: access)

8,700 per week

In 2023, were **delayed** in being discharged from the hospital for **at least 14 days**, and 24% of those were waiting for support at home.

OpenAI

Data Security

1. **Compliance standards:** emma is GDPR, DPA, HIPAA, SOC2 Type 2 compliant.
2. **End-to-end encryption:** the data held by emma is encrypted both at rest within the database and when in transit across the application.
3. **Zero data retention:** emma's AI processes data without storing it, ensuring the only place service user's data is stored is within our secure database.
4. **Storage limitation:** emma systematically reviews our database every 24 hours and deletes any data that is no longer critical for functionality.
5. **Password protected:** all conversations with emma are password protected on the carer's phone ensuring privacy.
6. **Controlled access:** access to emma is restricted to approved users and can be segmented at the service user / document level too. User access can be revoked on demand & is validated automatically every 24 hours.
7. **Routine security reviews:** our database undergoes regular third-party security reviews and penetration tests with findings addressed based on criticality.
8. **Requesting security summaries:** security personnel can obtain executive summaries of security findings to stay informed on database resilience.

Evaluation Framework

Introduction to Lilli

Delivering savings and supporting evidence based decision making in health and social care

Living with **Lilli**

Lilli is an award winning remote monitoring solution, that acts as an assistant to front line care professionals.

Using non-intrusive sensors and machine learning to provide data insights from an individual's patterns of behaviour in their home.

Lilli focuses on a proactive rather than reactive care approach to indicate issues before they arise so the right kind of care response can be given exactly when needed.

Early intervention can prevent health decline and give vulnerable people the opportunity to continue living safely and independently in their own homes.

👤 Wind down

11pm

👤 Expected movement

54 mins

90 mins expected

There have been 54 mins of activity in Russ' home. There is usually a total of 90 mins in a full day

Movement compared to last month

Here you can explore the details of this insight

Last month 28th Nov - 29th Dec This month 29th Dec - 28th Jan

*All time spent moving are estimates based on events triggered

We are the future of independent living

We empower vulnerable people to live independently, safely and happily within their own home.

We non intrusively monitor the patterns and behaviours of daily life, to identify soft signs and changes that might indicate a change in health condition. Allowing carers, loved ones and health practitioners to be better informed in how and when they need to support their VIP's (Vulnerable Independent People). We call this a proactive care model.

Delivering outcomes at scale for Medway

- Demand for care is rising at 7.5% YoY
- ASC spend for 2022/23 £124m rising to £131m in 202/24
- Senior leadership seeking £8m in savings across ASC
- Lilli facilitated YTD savings of £1m and ROI of 10X

*“It has driven a complete culture shift across the organisation... I think the fundamental part for us was **needing to think differently about how we worked to get our teams on board and if we hadn't have done that and made those changes, I don't think it would have worked in the way it has.**”*

Jackie Brown, Assistant Director of Adult Social Services, Medway Council

Thank you!

About me

Hi, I'm Layla! I'm a lively and curious 9-year-old who loves to explore and learn new things. I have a big imagination and enjoy spending time with my friends and family. I'm always up for an adventure and love making people laugh with my silly jokes. At school, my favorite subjects are art and science because I get to be creative and do cool experiments. I have a pet hamster named Nibbles who loves to run on his wheel and nibble on carrots. My friends say I'm kind and always ready to help others. When I grow up, I want to travel the world and learn about different cultures. One of my favorite things to do is have sleepovers with my best friends where we watch movies, play games, and stay up late telling stories.

My biggest dream

My biggest dream is to become a famous artist and have my own gallery where people from all over the world can come and see my paintings.

Hobbies

I love reading, drawing and painting, baking and building with LEGO

About

Eimi Fukada and Roger Kinnaird are a couple with two daughters; one is an adult living nearby, and the other is a teenager residing at home. The family practices the Muslim faith and lives in a three-bedroom house in a suburban area, with one bedroom available for fostering.

Eimi works as an adult care worker, providing her with a valuable skill set for fostering, including an understanding of risk and the impact of abuse and neglect on mental health. The couple believes that communication and good boundaries are key to supporting a young person, and they have a solid understanding of the requirements for fostering.

The family enjoys dining out and Eimi likes taking her children shopping. They stay fit by going on daily walks and, should they foster a younger child, they would enjoy visiting a nearby park. Eimi also enjoys cooking and baking and would like to teach these skills to the foster child. She believes that listening to the child's interests and encouraging their activities is most important.

Overview

The social worker has demonstrated consistent dedication and a strong work ethic, effectively managing caseloads and prioritizing client needs. Known for clear communication, empathy, and attention to detail, they have consistently met performance objectives, ensuring timely support and positive client outcomes. Their proactive approach and collaborative spirit have contributed to improved client satisfaction and seamless coordination with team members.

Strengths

Empathy and Compassion: Shows genuine care and understanding for clients, building strong relationships and trust.

Weaknesses

Emotional Boundaries: Occasionally may find it challenging to separate personal emotions from work, leading to stress or burnout.

Time Management under Pressure: High workload periods can impact the ability to prioritize tasks effectively, occasionally leading to delays.

Delegation Skills: Tends to take on tasks independently, which can limit efficiency and team collaboration in some cases.

Areas of Development

Self-Care and Resilience: Developing techniques to manage stress and prevent burnout could enhance long-term effectiveness and well-being.

Communication Skills: Communicates effectively with clients, families, and team members, making complex situations easier to navigate.

Organizational Ability: Manages caseloads efficiently, meeting deadlines and ensuring accurate documentation.

Challenge 4

Implementing a digital front door

Showcase
Information
Brochure

Digital front door

Expert panel

Keri Landau

Head of Government Partnerships, Apolitical

Ste Taylor

Managing Director, Ayup

Background

Who has designed the challenge?

This is a sector wide challenge – everyone on the list (and everyone else!)

The challenge

— What is the challenge? —

Councils deliver a number of key services that are essential to residents. Creating a single, accessible digital front door that **provides residents the information they're looking for and enables them to fulfill their needs**, can serve as a first port of call for residents alongside the variety of other channels and tools councils offer.

This type of approach may allow councils to cater to the needs of all residents. In line with central government ambitions of the [gov.uk platform](#), AI and smart technologies can be used in a **variety of ways helping signpost users to what they need, supporting them to resolve their enquiry and ensuring councils are responding to residents' needs.**

This is a unique challenge for councils who have:

- A huge variety of services, which often people only interact with at a point of need or even crisis.
- To meet the needs of everyone in the UK
- To constantly adapt and balance resources across front line services along with things like webdesign

The opportunity!

- We want a lot! Radical change on limited budgets please!
- See a lot of AI opportunity to help make difficult, complex data accessible and approachable to all
- There are significant concerns: security, ethics, hallucinations/ mistakes. We can't get this wrong!

The future?

- Is it useful to think **beyond websites**?
 - When websites become legacy tech how will we be interacting with our residents?
- Can we shape our services better by **knowing our residents** more?
 - Know what they want and need before they do?!
 - Link services better together to support the whole person?

FUTR AI

LGA SHOWCASE

INTRO

Enhancing Council Services with Futr AI

Tailored Solutions for Councils

Futr AI is a provider of cutting-edge AI solutions specifically designed for UK councils. We revolutionise the way with citizens by enhancing engagement and boosting operational efficiency through advanced technology.

Key Points:

- 1. Public Sector AI Specialists:** With a dedicated focus on local government services, we understand the unique challenges and requirements of the public sector.
- 2. Enhancing Accessibility and Efficiency:** Our solutions are crafted to make council services more accessible to citizens while streamlining operations to be more cost-effective.
- 3. Proven Success:** We have a solid track record of successful implementations across various council departments, delivering tangible improvements in service delivery.

THE CHALLENGE

Navigating the AI Landscape: Challenges Facing UK Councils

UK councils are at a crossroads, facing the pressing need to modernise services amidst rising citizen expectations. The rapid evolution of AI technologies presents both opportunities and complexities.

Key Points:

- 1. Increasing Demand for Digital Services:** Citizens now expect 24/7 access to services in areas like housing, council tax, and social care, necessitating a digital-first approach.
- 2. Complexity of AI Solutions:** The plethora of AI technologies can be overwhelming, making it difficult for councils to identify and implement the most effective solutions.
- 3. Integration with Legacy Systems:** There are valid concerns about how new AI solutions can be integrated with existing systems without causing disruptions.

TECHNICAL DIFFERENCES

Rapidly changing technologies: Understanding what's best and where to start.

UK councils should start by identifying high-impact use cases and choosing an AI solution that quickly addresses these needs while ensuring scalability and compliance.

Key Points:

- 1. Evolution of Chatbots to AI Agents:** The journey from simple rule-based chatbots to intelligent, autonomous AI agents capable of complex interactions, reasoning and decision-making.
- 2. Most RAGs offerings aren't production ready:** Limitations in long-term context, challenges with real-time data accuracy, scalability constraints, and difficulties in handling personalized or ambiguous queries effectively.
- 3. Reasoning capabilities with LLMs:** Leverages advanced contextual memory, real-time data integration, and multi-step reasoning, enabling more accurate, context-aware, and personalized responses.

SOLUTION

Revolutionise Customer Service with your own Multi-Agent Dream Team

Single purpose chatbots can't meet rising customer expectations or handle complex, multi-layered queries. A team of specialised AI agents working seamlessly together, both sequentially and in parallel, through a single chatbot interface can.

Key Points:

- 1. Handles Complexity:** Specialised agents manage language translation, sentiment analysis, GDPR compliance, and more.
- 2. Enhanced Efficiency:** Parallel processing speeds up responses, providing faster and smarter customer interactions.
- 3. Personalised Experience:** Delivers a unified, seamless interface for customers while multiple agents work behind the scenes.

AI Agents ⓘ

Search by Feature

Filter by Features

Suggest New Agent

Agent Type	Description	Status
Call to Action Agent	Suggests relevant actions to the agent based on the conversation (e.g., offer a discount, escalate to a supervisor).	On
Canned Response Agent	Provides agents with quick access to pre-written responses for common questions.	Off
Compliance Agent	Ensures that agents adhere to company policies and regulations during chat interactions.	Off
Feedback Agent	Prompts customers for feedback on their chat experience.	Off
Form Completion Agent	Helps customers fill out forms by pre-populating fields with information from the chat.	Off
Greeting Agent	Automatically greets customers and gathers initial information (e.g., name, issue).	Off
Offline Agent	Collects customer information and messages when no agents are available.	Off
Personalization Agent	Tailors responses and suggestions based on customer data (e.g., past purchases, browsing history).	Off

SOLUTION

Seamless AI Integration: Enhancing Existing Council Systems

Futr AI offers a multi-AI agent system that seamlessly *overlays* your existing infrastructure, enhancing functionality without the need for extensive system overhauls.

Key Points:

- 1. Integration with Existing Platforms:** Our AI agents work in harmony with current systems like CRMs, housing management, and council tax payment platforms.
- 2. Unified AI Agent & Chatbot Interface:** We provide a single, user-friendly interface that streamlines workflows and maintains continuity in service delivery.
- 3. Scalable and Flexible:** Our solutions allow for incremental adoption, enabling councils to implement AI based on specific needs and priorities.

VALUE FOR UK COUNCILS

Delivering Tangible Benefits: Efficiency, Accessibility, and Satisfaction

Implementing Futr AI's solutions brings significant advantages, driving improvements across multiple facets of council operations.

Key Points:

- 1. Enhanced Efficiency:** Automate routine inquiries and tasks, allowing staff to focus on more complex issues, which leads to improved overall service delivery.
- 2. Improved Accessibility:** Offer multilingual support and round-the-clock availability, ensuring that services are inclusive and accessible to all citizens at any time.
- 3. Increased Citizen Satisfaction:** Provide prompt and accurate responses to inquiries, strengthening public trust and engagement with council services.

CONSIDERATIONS

Security, Scalability and Ethics: Practical considerations for AI deployments

UK councils should prioritize solutions that ensure robust data protection, can grow with demand, and uphold ethical standards in AI transparency and fairness.

Key Points:

1. **Security:** Choose solutions with strong data protection, GDPR compliance, and encryption to safeguard sensitive information.
2. **Scalability:** Select solutions that can handle growing user demand and easily integrate new features as needs evolve.
3. **Ethics:** Ensure the solution promotes fairness, transparency, and responsible AI use, avoiding bias and protecting user trust.

Automated Care Pathways ACP

We have created over 30 pathways that are readily accessible for your digital front door. You can further personalise these pathways to better suit your community and professionals. Examples of available pathways include:

Pregnancy	Dad's Support	Children's Health	Speech and Language
			
Trimester 1, Trimester 2, Trimester 3, Feeding (Breast/Bottle), Perinatal Mental Health Support	Trimester 1, Trimester 2, Trimester 3, Feeding (Breast/Bottle)	Oral Health, Immunisations, Sleep, Diet, Mental Health	Age 0-6 months, Age 6-12 months, Age 12-24 months, Age 2-3 years, Age 3-5 years

Sources for the information and content for the pre-configured pathways comes from (but not limited to):

- Personalised Experience
- Live chat
- Mobile app
- Secure bot content
- NHS Content Integration
- API's
- Automations
- Voice search
- Intelligent search
- Modern UI/UX
- Conversational AI
- Automated Care Pathways
- Booking System

FamilyHub
Together for all in Halton

Need help, have a question, or just want to chat? Our friendly team is now available for live chat on Family Hub Online!

Download Halton Family Hubs App

www.haltonfamilyhubs.co.uk

The banner features a smartphone displaying a chat interface with a live agent and a chatbot. The chatbot is a friendly-looking robot character. The chat interface shows a conversation about finding the nearest Family Hubs centre. The background includes photos of staff members and a family.
